SUMMARY

Experienced Software Developer with over 14 years of expertise spanning Desktop, Mobile, and Embedded Application Development, alongside Web Development and Computer Vision Applications. Skilled in crafting server and client applications across diverse platforms including Windows, Linux, Mac, Android, and iOS. Proficient in managing the entire software development life cycle from inception to deployment.

EXPERIENCE

Full Time Freelancer

2023- Present

Upwork Profile: <https://www.upwork.com/freelancers/harish33>

Senior Software Developer - Vappica I(Remote) (New York, US)

June 2014 - Dec 2022

- Spearheaded the development of cutting-edge Network Camera Recorder Software utilizing Qt framework, integrating advanced analytics such as Object Detection/Recognition, Motion Detection, and Email Alert systems.
- Designed and implemented cross-platform Client Applications for Windows (Qt/QML), Android, iOS, and Web platforms, enabling seamless previewing and analysis of server data.
- Engineered an IP camera Viewer compatible across Web, iOS, and Android platforms.
- Led the development of a WebRTC-based classroom project facilitating Audio/Video/Text Chat functionalities along with features for assignments, exams, and student management.
- Architected and developed a beacon configuration application using the Qt framework, effectively managing beacon-based advertisement systems for smartphones.
- Implemented Raspberry Pi Camera recorder solutions with video analytics capabilities including Object Detection, Recognition, and Alert systems.
- Designed and developed a Raspberry Pi-based Intercom System with client applications for Android and iOS platforms using WebRTC technology.
- Contributed to the development of a web project for managing Access Control Systems and Remote Door Operations, leveraging technologies such as Apache web server, MySQL, and PHP on Ubuntu server environment.

Design Engineer - NiLogic Pvt Ltd (Pune, India)

June 2011- May-2014

- Implemented Computer Vision applications on Beagle board, specifically focusing on Fire and Cloud detection during explosions and dimension measurement tasks.
- Successfully executed cross-compilation of Linux kernel for Beagleboard platforms.
- Developed an Android application to control Raspberry Pi GPIO functionalities, enhancing device interactivity and control.

SKILLS

Programming Languages: C/C++, Java, Python, Php, HTML, JavaScript, Shell Script, Flutter.

Frame work: Qt/QML, OpenCV(ML), Android(Basic), IOS(Basic), TensorFlow,Keras(Basic)

EDUCATION

Bachelor Of Science(Electronics)

Kannur University
2006-2009, Kannur

Master Of Science (Electronics)

Cochin University of Science and Technology
2006-2009 Cochin
